Hello

I'm Julian, a Software Engineer currently based out of Phoenix, but hoping to get back home to The Bay soon because it's way too hot out here. I specialize in RWD and building single-page applications using scalable javascript frameworks like Ember.js, and building products that pull interesting data from APIs. I'm interested in scalability and design and enjoy working closely with designers. I'm looking for a role at a startup or large company that focuses mainly on front-end or UI engineering, building components and mainting scalable component libraries—but I'm also open to other options as long as it means we're shipping awesome stuff.

Proficiencies

HTML5, CSS3, SASS, JavaScript, Ember,js, Ruby on Rails, Linux, PHP5, Sketch 3, Illustrator

Experience

Revision Agency
Los Angeles, CA (Remote)
Full-Stack Developer
Aug. 2016 - Present
